

At LED we like nothing better than a challenge, and when asked to develop a led light bulb that would last for years, not be affected by vibration, be visible from all angles for miles, consume minimal energy, and match the color of a standard incandescent bulb, we stepped up to the plate. Only the Ever-Globe 5000 by L.E.D is tough enough to meet all the above criteria, and be used on the new Mickey Mouse Roller Coaster at Disneyland.

Utilizing a cluster of 30 white leds (blue for Mickey), a prismatic color corrected lens that spreads the light and produces an incandescent color, and our UV stabilized egg shaped globe, LED hit a home run.

Custom made to your specifications, choose medium, candelabra, or intermediate base bulbs, in low voltage or line voltage, along with a wide range of colors to meet YOUR design criteria. Available in White, Incandescent White, Blue, Green, Amber, and Red the Ever-Globe 2000 by LED is the Ultimate

FEATURES AND BENEFITS

- Vibration Resistant
- Less than 2 watts per bulb
- 100,000 hour rated lamp life
- UV Stabilized Housing
- Prismatic Lens

- Wide Viewing Angle
- Wide range of pure and color corrected colors
- Variety of Bases
- 120V, 12V, 24V
